Pishiobury Park
Master Plan
March 2005

Improve park entrance from Newton Drive. Remove fencing, extend Oak Walk and reinforce woodland perimeter.

Re-define woodland edge. Maintain woodland belt along road, but allow development of open scrub on parkland edge.

Round off sharp edges to recent landscape roundels and plant hawthorn around edge to reflect historic planting layout.

Remove Poplars and replace with Oak 'gate keeper' trees. Mirror this at northern crossing point.

Open 'key holes' to increase views across the park through rotational coppicing of thorn. This 'hedge line' must remain subordinate to the Oak Walk.

Do not actively restore hedges. Select groups of thorn and fence off so as to create new landscape features. Allow natural losses to open the hedge line further, thus leading to a gradual inclusion of 'Lime Meadow' into wider park.

Maintain Lime Avenue so as to echo the alignment of former avenue lines. Formative prune young trees.

Plant hawthorn hedge along woodland perimeter/parkland boundary and re-fence.

Only plant Oak along Oak Walk. Replace very recent planting of other species. Develop an in house style of parkland guards and stick to it.

Plant individual landscape trees to complement woodland perimeter and smaller landscape roundels. Follow layout and density of 1st edition OS Map.

Keep the 'chalk bank' free of trees and improve grazing management.
